Components of the Cardiovascular System

- consists of the heart plus all the blood vessels
- transports blood to all parts of the body in two 'circulations':
 - pulmonary (lungs) & systemic (the rest of the body)
- responsible for the flow of blood, nutrients, oxygen and other gases, and hormones to and from cells

Read Book Anatomy And Physiology System ...

The heart is the key organ of the cardiovascular system - the body's transport system for blood. A muscle that contracts rhythmically and autonomously, it works in conjunction with an extensive network of blood vessels running throughout the body. Basically, the heart is a pump ensuring the continuous circulation of blood in the body.
