Acquiring motor skill is a process that requires practices, feedback, and involvement of the learner. This frame of reference employs several principles from learning theory. It focuses on the child's ability, characteristics of the task, skills required, environment, and regulatory conditions. Regulatory conditions are aspects of the environment that determine movement specifics, which are described in a continuum between closed and open tasks.

To this end, Fitts (1964; Fitts & Posner, 1967) suggests that motor skill acquisition follows three stages: the cognitive stage, the associative stage, and the autonomous stage. As a coach I found this simple paradigm to be extremely helpful for understanding, guiding, and accelerating the motor learning process.
